SUMMARY

Software Engineering student with hands-on experience building and shipping production applications. Interested in backend engineering, distributed systems, and database technologies, with experience developing scalable solutions using .NET, React Native, PostgreSQL, and cloud services.

TECHNICAL SKILLS

Languages: C#, TypeScript, SQL, JavaScript, Python, Familiar with PHP & Java

Backend & Data: ASP.NET Core, Laravel, Entity Framework Core, SQL Server, PostgreSQL, Redis, Clean Architecture, CQRS (MediatR), Modular Monolith

Mobile & Frontend: React Native, Expo, React

DevOps & Tools: Docker, Azure, Supabase, RevenueCat, Brevo, Vercel, Google Play Console

PROJECTS

Fonolog — Full-Stack Mobile Application

Freelance | Solo Developer | Paid Client | Google Play Published

- Designed, developed, and launched a production mobile application independently, from architecture design to Google Play release.
- Built an educational game teaching phonological awareness to children (ages 5–12) with speech delays, delivering **24 educational game modules** across 6 distinct screen types with full offline session support.
- Resolved cross-region payment constraints by implementing a cross-platform in-app purchase flow using **Google Play Billing** and **RevenueCat**, enforcing server-side receipt validation via **Supabase Edge Functions** (Deno / TypeScript).
- Designed a multi-role authentication system (child, specialist-teacher, admin) using **Supabase Auth** with email verification and enforced **PostgreSQL Row-Level Security (RLS)** across all database tables.
- Integrated **Brevo API** for transactional email delivery (verification flows, payment updates) and handled dynamic in-app PDF report generation and push notifications via **Expo**.

Multi-Vendor E-Commerce Platform — Modular Monolith Architecture

Personal Project

- Designed a **modular monolithic** e-commerce system in **ASP.NET Core** with clear **domain separation** to improve scalability and maintainability.
- Implemented core business workflows including product **catalog**, **vendor** management, **authentication**, and **order processing**.
- Built **event-driven communication** between modules using **MediatR** for loose coupling and extensibility.
- Applied **CQRS** and repository patterns with **Entity Framework Core** for consistent and maintainable data operations.
- Improved performance using **Redis** caching and implemented **role-based access control** (Admin, Vendor, Customer).

EDUCATION

Kütahya Dumlupınar University — B.S. in Software Engineering (Expected Graduation · June 2027)

Microsoft Certified: Azure Fundamentals (AZ-900) · 2026

LANGUAGES

Arabic (Native) | English (Fluent) | Turkish (Fluent)
